Getting the most out of any cloud

➢ By 2025 unstructured data will account for up to 80 per cent of the global data volume that will reach 163 zettabyte

➢ Need for attaining insights from this growing data set without exposing to unnecessary risk

➢ Organizations must discover and classify files containing sensitive data

➢ Do you have the tools needed to retain control of your critical business information and processes?
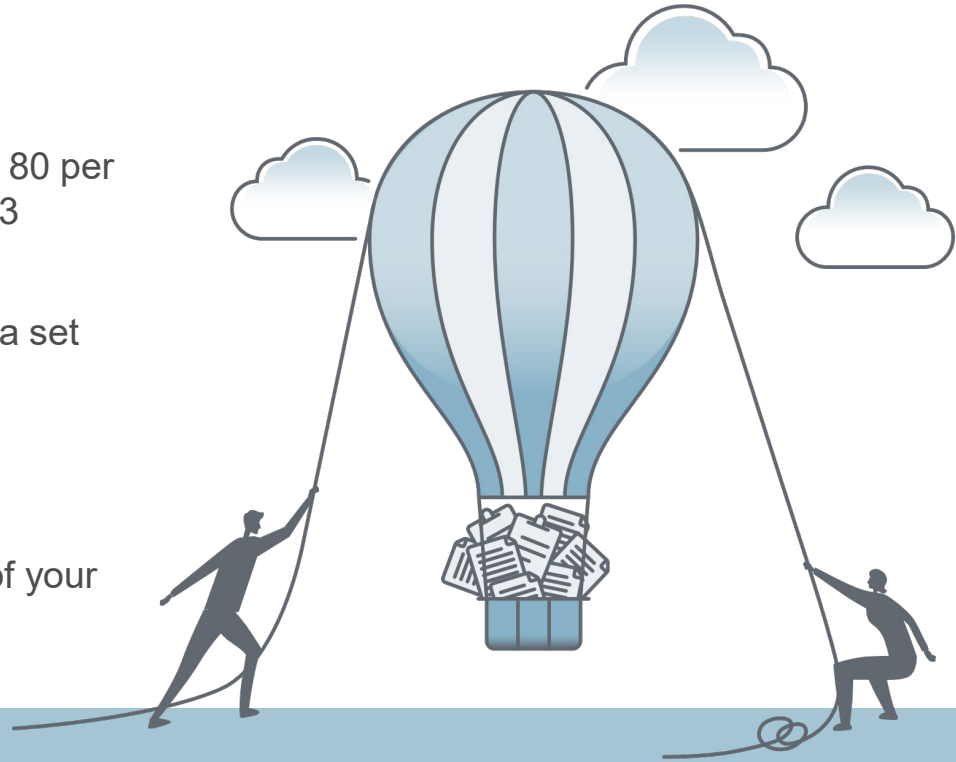

Into the world of Cloud

Fastman Spotlights

SnoPUD Use-Case: Load Taxonomy

SnoPUD is **retiring multiple large 'division folders'** sets located on shared drives and migrating to the Content Suite Platform.

Using BDM, SnoPUD **loads folder structures** with documents to CSP whilst enriching the meta-data (categories/attributes).

By using BDM, the transition to the **OT Cloud was** eased whereas you can use BDM in both environments. No scripting is required and business users can perform the migration. The architecture allows for the client to **push content** located on shared drives to a **CSP cloud deployment**.
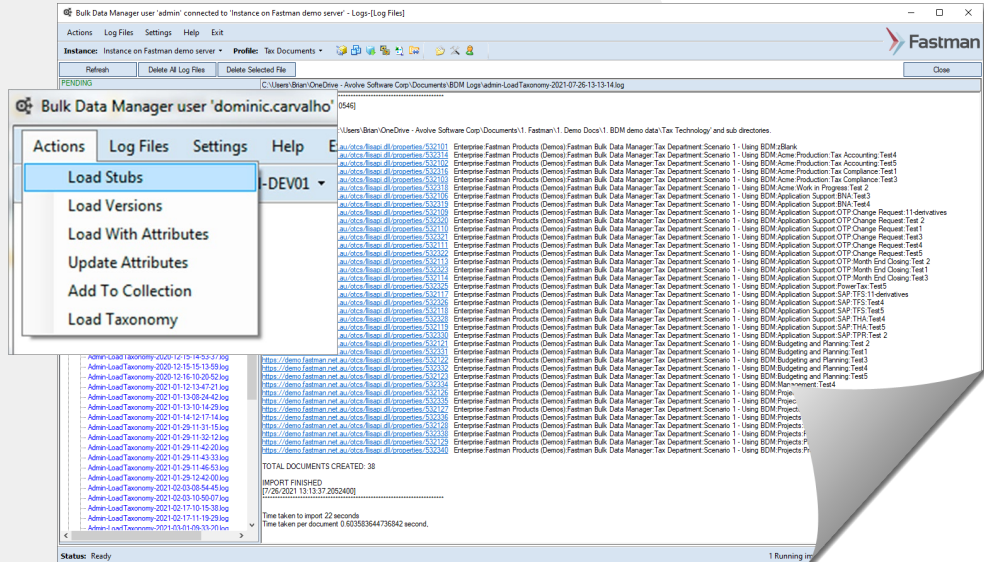

Permissions and Access Control Solutions

Value for OT Cloud Users

- **Dashboard view** of access lets you make changes with confidence + the ability 'Rollback'

- Alleviate need for **ad-hoc reporting** and development

- Eases the frustration when you don't have **System Administrator** access

- Streamline **user onboarding** and granting access with the **'Compare Groups'** functionality

- Ensure **security model is compliant** with organizational policy

- Support for **containerized** deployments

- Advanced support for working with **Roles on Business Workspaces**

Fastman

opentext™ | Cloud Certified

Enable More Self-Service

- Reduce your *paid service requests* fees ($) from your cloud provider

- Handle **bulk permissions** updates and ease user onboarding

- Enable **'Business Admin'** in your CSP and see all that can be done with **Permissions Manager** in the cloud
